**Mossberg® Introduces 590® Shockwave with Crimson Trace® Lasersaddle**

NORTH HAVEN, CT – O.F. Mossberg & Sons, Inc., a leading American firearms manufacturer, announced today the introduction of the widely-popular 590 Shockwave 12-gauge pump-action firearm now equipped with the new Crimson Trace LS-250 Lasersaddle™ Red Laser Sight. The pairing of a sight system with the 590 Shockwave platform provides a compact, easy-handling personal defense firearm for your home, camping and boating needs.

Built on Mossberg’s proven pump-action design, the 590 Shockwave features an overall length of 26.37 inches; 14-inch heavy-walled barrel; non-binding twin action bars; positive steel-to-steel lock-up; an anti-jam elevator; dual extractors; and an ambidextrous, top-mounted safety. Other features include a clean-out tube; drilled and tapped anodized aluminum receiver; cylinder bore barrel with single bead sight; and sling swivel studs. Unique to the 590 Shockwave models are a “bird’s head” shaped-profile grip that allows for greater control while lessening felt recoil.

Mossberg partnered with Crimson Trace to develop a laser sighting system specifically for the 590 Shockwave and other Mossberg 590 and 500® pump-action platforms with drilled and tapped receivers. This innovative new sighting system, which features a powerful 5mW red laser, is secured onto the 590 Shockwave’s receiver and features an On/Off Switch for powering down the system. The LS-250 Lasersaddle operates with three distinct activation pad points, including one that can be accessed by left-handed users. The batteries (CR2032) can be easily replaced via a battery cap on the sight’s exterior without removing the laser sight from the firearm. The LS-250 Lasersaddle is also user-adjustable for windage and elevation.
